WorléeAdd ST-70

Art.-No. 114501-00833

Revision: 23.05.07

W´Add ST-70 is a free flowing stannous octoate catalyst used in polyurethane powder coatings. The product is prepared from a liquid stannous octoate and an amorphous silica powder.

Technical Data:

Appearance	white powder
Active stannous octoate	68 - 72%

Application and Properties:

W´Add ST-70 can be used in acrylic-urethane and polyester-urethane powder coatings to increase the reactivity. The recommended addition is between 0.1 - 0.5%, it is blended in the dry-mixer with all the other ingredients prior to extrusion.

Storage and Handling:

W´Add ST-70 is shipped in 45.4 kg fibre drums containing polyolefine liner. The product is chemically protected against atmospheric oxidation and its storage stability is good. However, in order to avoid any degradation of the catalyst, the containers should always be closed. Unnecessary exposure to moisture and atmospheric oxygen should be avoided.
