WorléeAdd 101 P

Art.-No. 114501-03909

Revision: 03.07.06

W'Add 101 P is a white, free-flowing powder flow and levelling agent especially developed to correct surface imperfections in powder and injection molding systems.

Craters, pinholes and fisheyes may be eliminated or substantially reduced by incorporating 0.5 - 1.5% based on total formulation of W'Add 101 P into all kinds of powder coatings. However, the optimum concentration for each specific system should be determined by laboratory evaluation.

In contrast to many other acrylic flow control agents W'Add 101 P is achieving haze-free and high gloss surfaces. Additionally also the flow is improved in many cases

Technical Data:

Appearance	white powder
Non volatile content, 2h/105 °C, DIN EN ISO 787-2	min. 96%

Application and Properties:

W'Add 101 P is suitable for powder coatings of different compositions.

As a free-flowing powder, W'Add 101 P is easily incorporated into powder coating formulations by the standard dry blending operation.

The compatibility with powder coatings containing different flow control additives could be critical. We recommend corresponding preliminary trials.
